At Cryoquip, we see the opportunity in every challenge. We take pride in applying innovation to developments in our industry as they arise. As more industrial gas consumers have expanded farther away from the traditional liquid source of the cryogen, new solutions were needed to meet their specif cneeds. One eff cient solution was the development of specialized mobile equipment. We worked to achieves customers' need for options for conducting essential processes withoutfi

(such as chemical reactors, pipelines and other chemical plant processing equipment) is required for maintenance services. In addition, a permanent purge line cannot be justified due to high cost and limited plot space. In situations such as these, a liquid cryogen trailer and a separate vaporization trailer are brought onsite for the temporary purging process. A vaporizer
